Science Teaching 542D

Timescapes: Momentous, World Altering Events

Two Credit Hours

Prerequisites: ST 525-Survey of Geology

Instructor: Dr. Donald L. Wolberg and Dr. Stephen Hook

E-mail: aragonite@msn.com

Office phone: (505) 710-3050

Course Designation: This is an elective course to fulfill science requirements.

Course Description: This course is designed for science majors interested in discovering the great events occurring over the last 4.5 billion years of Earth history. Churchill said, “History is just one thing after another,” but the history of planet Earth can be viewed as having been shaped by momentous, world-altering events, millions of years apart. These will form the basis of this course. The course will meet distribution requirements for science majors.

Materials, Readings, and Resources:

A series of readings will be assigned to amplify the lectures. Two field trips are planned and there will be assignments, a paper, and a final examination.

Content:

1. Setting the Stage Before We Start

Some Basics: The ABCs of the World. How we measure lots of time and not so much time: the geologist’s calendar, the GTS (Geologic Time Scale); relative and absolute clocks

Aside: How to become a fossil
2. **Timescapes One (2 Million Years Ago to Now)**

The Human Age; A tale of Tails, people, almost people, not people but still cousins and some cousins who hang out in trees; lands of ice and hair helps;

Aside: Ice Ages; Again and Again the Ice Returned. Will it be Back?

3. **Timescapes Two (65 Million to 2 Million Years Ago)**

It’s the Age of Mammals, Cenozoic Era) warm blood, hair, fur and live babies are in but what’s a mammal; the seas teem with scaly swimming things and there are still shells everywhere (so is it really the New Age of Fishes); things on six legs and eight abound, more kinds than all the other kinds of animal (so is it really the Age of Insects and Spiders). Flowers, pollen and seed are everywhere (so, is it really the Age of Flowering Plants); grasslands spread and so do animals that eat grass

Aside: The Big Groups: Animals and Plants and evolution of the idea of evolution

4. **Timescapes Three (65 Million Years Ago)**

The Big Boom; Catastrophe from Space 65,000,000 years Ago and Collapse of the Mesozoic World; Iridium and its story (all that is in the platinum group is not gold)

5. **Timescapes Four (245-65 Million Years Ago)**

A Blink of the Cosmic Eye: The Mesozoic Era, Dinosaurs and their Cousins Rule the Land, Sea and Air (and mammals play it cool); the Greatest Invasion Ever as Modern
Forests Spread from the North; the last, great days of Pangea and the new worlds of Laurasia and Gondwana. Fur is around, but it’s smarter to stay small and out of the way.

Aside: The main dinosaur groups and their non-dinosaur allies

6. **Timescapes Five (245 Million Years Ago)**

The Great Dying; the worst extinction event ever and it almost ended life on this planet; ancient ice ages in the southern continents and experiments in temperature regulation and mammal-like reptiles

7. **Timescapes Six (360-286 Million Years Ago)**

Making the world’s coal; the “Carboniferous” may be called the Pennsylvanian and Mississippian in North America, but it is truly the “Coal Age”; but take a close look and the first reptiles appear; it’s all in the egg

Aside: A look at how the world stores carbon and ancient greenhouses

8. **Timescapes Seven (370 Million Years Ago)**

Invasion of the Land (and the First Fliers); Breathing Air is Tough; Getting Around on Land is Tougher whether you have a backbone or not. Having green leaves, roots and standing in one place your entire life is really rough; the First Forests

Aside: I bet you didn’t know that the fish group that emerged on land is still alive

9. **Timescapes Eight (520- 370 Million Years Ago)**
Shells and chitonous skin Rule the World But It is Also the Ages of Fishes; all those
different animals: bivalves, nautiloids, brachiopods, trilobites and gra[tolites; what does
a coral tell us about time?

10. Timescapes Nine (550 Million Years Ago)
The great Cambrian Explosion of Life; it’s half a billion years before yesterday and
something really big is happening. The new atmosphere and what’s that in the breeze,
oxygen?

11. Timescapes Ten  (700 Million years Ago)
The first signs of complicated living things; where is Ediacara and why does it matter?
Aside: Why the day has not always been 24 hours and the year was once longer

12. Timescapes Eleven (2.5 to 3.7 Billion Years Ago)
The Differences Between Being not alive and alive; A look at the cookbook for getting
from not alive to alive and did it only happen here or just about everywhere. Why is the
Moon so big and look at those tides
Aside: A time when oxygen was poison and why we have all those iron ores

13. Timescapes Twelve (4.5-4.9 Billion Years Ago)
It Begins; our part of the universe, the Sun the Other Planets and Us

14. Timescapes Thirteen (12 Billion Years Ago)
The Ultimate Timescape: the Origin of the Universe; the first three minutes and the next 20 billion years; origin and destruction of elements; the Big Bang and Black Holes

Course goals: This is a history course of a different kind: it is the history of a planet, Earth, and its creatures. Just as human history is punctuated by events of great magnitude, Earth history can be seen as a series of momentous “Timescapes” that altered the planet. Students will become familiar with the history of their planet.

Schedule: This is a recorded course.

Attendance: This is a recorded course and following the lectures in the order given is strongly recommended.

Grading: Grades will be based on assigned work, reports to be submitted and a final examination. An interim midterm grade will be given based on graded work to-date. The final exam must be PROCTORED by a responsible party (principal or counselor); students must submit the name, title, and address of the responsible party before the last day to add classes (no exceptions). Failure to provide a proctor will result in being dropped from this class.

Help: Students may and should help each other. Students are strongly encouraged to work together. The instructor is available for help via email and telephone. Individual requests for help can also be accommodated by appointment.

<table>
<thead>
<tr>
<th>COMPETENCIES FOR ENTRY-LEVEL SCIENCE TEACHERS:</th>
<th>addresses competency</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Instruction and Assessment: Preparation to teach science shall involve:</td>
<td></td>
</tr>
<tr>
<td>(i) Inquiry, Including the Scientific Method</td>
<td>X</td>
</tr>
<tr>
<td>(a) Select and use a variety of instructional strategies and materials for teaching science meeting the needs of all students.</td>
<td>x</td>
</tr>
<tr>
<td>(b) Implement active inquiry based learning activities conducive to the development of scientific processes, critical thinking skills, and problem solving skills.</td>
<td>x</td>
</tr>
<tr>
<td>(c) Implement design technology/scientific method: identify a problem; propose a solution; implement proposed solutions; evaluate product or design; communicate a problem, design, and solution.</td>
<td></td>
</tr>
</tbody>
</table>
(d) Implement technology, including computers, interactive video, telecommunication, scientific instrumentation, and others.

(2) Content Integration

(a) Develop student understanding of the interconnectedness of the sciences and relate the major concepts of chemistry, earth and space science, physics, and biology to the teaching of science.

(b) Develop meaningful application of all content areas, including math, technology, language arts, social studies, and arts, in the delivery of science instruction.

(3) Designing and Managing Learning Environment

(a) Fulfill the professional and legal obligations of teaching.

(b) Incorporate the proper use of science tools, materials, media, and technological resources.

(c) Establish and maintain safety in all areas related to science instruction.

(d) Use and care for living organisms in an ethical and appropriate manner.

(4) Effective and Ongoing Assessment to Improve Student Learning

(a) Use assessment techniques such as performance testing, interviews, portfolios, and observations, for assessing student outcomes which are aligned with instruction and consistent with contemporary assessment.

(b) Use assessment tasks which may be appropriately modified to accommodate the needs of students with physical disabilities, learning disabilities, limited English proficiency, and cultural diversity.

B. History and Nature of Science: Preparation to teach science shall include:

(1) Diversity and Human Endeavor

(a) Describe science careers and reasons why people choose science as a career, including the impact of culture, gender, and other factors.

(b) Describe the science contributions of people from a variety of social and ethnic backgrounds who have diverse interests, talents, qualities, and motivations.

(c) Develop student understanding of the relationships among science, technology, and cultural values.

(d) Recognize and respond to student diversity and encourage all students to participate fully in science learning.

(2) Empirical Observation

(a) Explain that science distinguishes itself from other bodies of knowledge through the use of empirical standards, logical argument, and skepticism.

(b) Explain that scientific ideas depend on experimental and observational confirmation.

(3) Historical Perspectives

(a) Understand that the body of scientific knowledge is continually being expanded and refined.

(b) Explain how theories and ideas throughout the history of science are refined or discarded as new evidence becomes available.
(c) Explain how Western, non-European, and New Mexican cultures have developed scientific ideas and contributed to scientific knowledge.

C. Content Categories: The following areas are designed to allow potential science teachers to construct their pre-service education with an emphasis in one content area, while insuring they receive science education in any area which they might be required to teach. Preparation to teach science shall enable the teacher to understand and be able to teach within at least one of these emphases:

<table>
<thead>
<tr>
<th>Emphasis</th>
<th>Content Area</th>
<th>Detailed Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Life Science Emphasis:</td>
<td>All science teachers, grades K-12 will be able to identify and understand the relationship among major concepts and principles of biology, including anatomy, physiology, ecology, behavior of organisms, evolution, genetics, cell biology, microbiology, classification, and human biology.</td>
<td></td>
</tr>
<tr>
<td>(a) Teachers know and understand the characteristics that are the basis for classifying organisms.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(i) Teachers for grades K-4 will demonstrate an awareness of living things including basic cellular functions and processes, structures, the roles of organisms in systems comprised of living and non-living components and describe life cycles of plants and animals.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(ii) Teachers for grades 5-8 will use information about functions and cell structures to explain replication, reproduction, heredity, and disease, and categorize organisms based on methods of reproduction and offspring development.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(iii) Teachers for grades 9-12 will apply information about cell structures and functions to the world in which they live including understanding of DNA, RNA, natural selection processes, and diversity in plants and animals and use biological classifications to understand how organisms are related.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(b) Teachers will know and understand the synergy among organisms and the environments of organisms.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(i) Teachers for grades K-4 will explain how an organism's behavior is related to its physical environment; describe the roles of plants and animals in the flow of energy; describe how environmental pressures may accelerate changes in organisms; describe populations, communities, and systems; describe the impact humans have on the environment; understand natural resources (renewable versus non-renewable) and how each relates to humans' basic needs, and describe elements essential to good health.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>(ii) Teachers for grades 5-8 will understand organisms' physical and behavioral adaptations and how changes occur over time; describe how organisms meet their needs, grow, and reproduce while sustaining stable local surroundings within an ever-changing larger environment; predict organisms' behaviors that may result from external stimuli; use information about variation and diversity to explain population changes over time; categorize organisms based on their roles within the ecosystem in which they live; examine the impact humans have on the living and non-living world including issues related to overpopulation; illustrate the relationships among renewable and non-renewable resources and population, and model responsible health practices including issues relating to nutrition and exercise.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
(iii) Teachers for grades 9-12 will explain cellular responses to environmental threats to the organism ranging from the production of antibodies to changes in coloration; understand the pathways of energy within a living organism; predict an organism's behavioral responses to internal and external changes and to external stimuli as a function of inherited and acquired characteristics; create models that mimic a population's response to internal and external environment pressures; predict the impact humans might have on a species or system including resource depletion and over population, and interpret the relationships between personal choices and health.

(2) Physical Science Emphasis: All science teachers, grades K-12, will be able to identify and understand the relationships among chemistry concepts including organic, inorganic, analytical, physical, and biochemical and identify and understand the relationships among physical concepts including mechanics, electricity, magnetism, thermodynamics, waves, optics, atomic, and nuclear physics.

(a) Teachers will be able to know and understand the properties of matter.

(i) Teachers for grades K-4 will describe the observable properties of common items and substances and explain that elements are the basic units of all matter.

(ii) Teachers for grades 5-8 will identify the properties of elements and compounds such as density, boiling point, and solubility and that these characteristics are independent of amount of the sample and articulate that chemical reactions occur in a predictable fashion and that the formation of compounds adheres to imperatives as conservation of matter.

(iii) Teachers for grades 9-12 will compare and contrast elements and compounds based upon the knowledge of the atomic/subatomic structures of matter and predict how atoms interact based upon sharing or transference of outer electrons.

(b) Teachers will know and understand the properties of fields, forces, and motion.

(i) Teachers for grades K-4 will describe how an object may be described with regard to its relative position to other objects; explain that an object's motion may be described by indicating change over time and describe how the earth's gravity pulls objects toward it.

(ii) Teachers for grades 5-8 will illustrate how Newton's Laws describe objects in motion; describe quantitatively how an object's position, speed and motion explain motion and compare and contrast forces affecting the physical world.

(iii) Teachers for grades 9-12 will apply knowledge of the constancy of energy in the universe and the forms that energy take in daily life; predict the motion of an object based on the net applied force applied to the object and explain and graphically describe that a specific mass exerts a force on others masses (velocity and acceleration).

(c) Teachers will know and understand the concepts of energy and energy transformation.
(i) Teachers in grades K-4 will describe the basic characteristics of light, heat, sound, and electromagnetism, and explain that energy exists in many forms and can be transformed and describe the process of chemical reactions and how time is a factor in chemical reactions.

(ii) Teachers in grades 5-8 will apply knowledge of energy and energy transformation to science problems; explain how chemical reactions can take place over periods of time and explain how concentration, pressure, temperature, and catalysts may affect chemical reactions.

(iii) Teachers in grades 9-12 will demonstrate their understanding of energy by identifying examples of transformations within and outside the school environment and devise scientific investigations demonstrating the impact of temperature and other variables on chemical reactions.

(3) Earth and Space Science Emphasis: All science teachers, grades K-12, will know and understand properties of earth and space science.

(a) Teachers in grades K-4 will describe the physical and chemical properties of earth's materials and the states of matter; describe the uses of earth's materials as resources and the sun as the major source of energy; describe changes in the earth's surface; describe changes in weather; recognize that fossils provide a record of animals and plants that lived long ago; represent the school and local community using symbols and maps; describe basic components of and movements within the solar system; identify the types of instruments and vehicles used for space exploration and describe human's movement toward space from early observations to recent explorations.

(b) Teachers in grades 5-8 will explain how earth's materials can be transformed from one state to another; experiment with earth's materials using them as resources; model natural resources that shape the earth's surface; observe, measure, and record weather changes; explain how fossils are formed and how fossils provide evidence of complexity and diversity over time; use rectilinear coordinate systems such as latitude and longitude to locate points on the earth's surface; describe the interactions among the earth's lithosphere, hydrosphere, atmosphere, and biosphere; explain simple data derived from recent remote and direct observations in the solar system and space beyond; model the predictable patterns of the sun and planets in the solar system and cite benefits from continued exploration of space.
(c) Teachers in grades 9-12 will evaluate information about earth's materials, energy, and geochemical cycles; model the interaction between the earth's internal and external energy sources; use tectonic theory to predict changes in the earth's surface; model weather patterns and other natural cycles related to the movement of matter driven by the earth's internal and external sources of energy; use fossil and other evidence to investigate how the earth changes; extend mapping techniques to learning in science and other content areas; explain the evolution of earth in terms of the interactions among the geosphere, hydrosphere, atmosphere, and biosphere; model interactions between components of the earth based on the understanding of the earth as a system containing a fixed amount of each stable chemical or element; trace the development of space exploration and discuss how recent missions impact understanding of the earth; evaluate the hierarchy of structures in the universe from atoms to galaxies and identify the pros and cons of various scientific theories for the origin of the universe based on scientific evidence.

(4) Environmental Science Emphasis: All science teachers, grades K-12, will be able to identify and apply major concepts of environmental science such as ecosystems, energy flow, population ecology, natural resources, meteorology, geology, oceanography, and conservation.

D. Environmental, Personal and Social Implications: Preparation to teach science shall enable teachers to understand and be able to teach:

1. Personal, community, New Mexico and global environmental issues;
2. The approaches to evaluate the ethical implications of new developments in science;
3. Personal and community health issues;
4. Decision-making and value-analysis skills for investigating science-related societal problems;
5. Ethical use and care of living organisms.

E. Professionalism: Teacher education programs shall develop reflective practitioners who:

1. Foster in their students scientific interest and curiosity.
2. Participate in professional scientific organizations.
3. Serve as representatives of the scientific community.
4. Engage students in coherent, focused, student centered science curriculum, consistent with state and national standards.
5. Identify and use a variety of community resources including local expertise, industry, local environmental settings, and families.
6. Take advantage of collaborative planning among colleagues, scientists, and science teacher educators, so that science, science methods, and other program components are mutually reinforcing.
7. Explore and evaluate the process of curriculum and instructional implementation.
